PROFESSIONAL SUMMARY

Detail-oriented B.Com graduate with hands-on, project-based experience in SQL, Excel, Power BI, and Tableau, seeking an entry-level Data Analyst role. Skilled in data cleaning and validation, statistical analysis, dashboard development, business intelligence reporting, and translating raw data into clear, actionable insights for cross-functional stakeholders. Strong foundation in data visualization, trend analysis, and reporting workflows, with a proven ability to learn analytical tools quickly and deliver accurate, decision-ready results.

TECHNICAL SKILLS

- Languages & Tools: SQL (MySQL), Excel (Advanced: VLOOKUP, INDEX-MATCH, Pivot Tables, Pivot Charts), Power BI, Tableau, Power Query, DAX
- Core Competencies: Data cleaning & transformation, data validation, statistical analysis, data interpretation, business intelligence (BI) reporting, data visualization, dashboard & report design, trend analysis
- Professional Skills: Problem-solving, analytical thinking, stakeholder communication, written and verbal communication, attention to detail

PROJECTS

World Layoffs Analysis Dashboard | *Power BI, Power Query, DAX, Excel*

- Developed an interactive Power BI dashboard analyzing global layoff trends across 1,600+ companies, industries, and countries to support business intelligence reporting
- Performed end-to-end data cleaning, validation, and transformation using Power Query to ensure reporting accuracy
- Built DAX measures and KPIs to track total layoffs, affected companies, and year-over-year trend analysis
- Designed interactive data visualizations using slicers, charts, and KPI cards, improving stakeholder insight and decision-making speed

Hotel Bedroom Dashboard | *Tableau, Excel*

- Built an interactive Tableau dashboard to analyze hotel bedroom and property listing data across multiple regions
- Visualized room availability, pricing trends, accommodation capacity, and property details through multiple chart types for clearer business intelligence reporting
- Implemented interactive filters and dashboard views to enable self-service data exploration for stakeholders
- Presented key data-driven insights to support business decision-making through effective data visualization

SQL Data Cleaning Project | *MySQL*

- Cleaned and transformed a raw layoffs dataset of 2,300+ records using MySQL to improve data quality, consistency, and validation
- Identified and removed duplicate records using CTEs and the ROW_NUMBER() window function
- Standardized company, industry, and country name fields, and converted date values into SQL DATE format for consistent reporting
- Handled missing and blank values using UPDATE, SELF JOIN, and NULL value replacement techniques
- Removed invalid records and unnecessary columns to produce a clean, analysis-ready dataset
- Applied advanced SQL concepts including Joins, CTEs, Window Functions, ALTER TABLE, UPDATE, and DELETE

EDUCATION

B.Com (General) | SCP Jain College, Minjur
