

PYTHON

SET-1

- Create a list of 10 numbers and print all even numbers.
- Create a list of names and print each name using a for loop.
- Find the largest number in a list without using max().
- Find the sum of all numbers in a list.
- Count how many times a given number appears in a list.
- Print all fruits except "Mango" from a list.
- Create a function to return the total number of elements in a list.
- Find all numbers greater than 50 from a list.
- Create a function to check whether an item exists in a list.
- Reverse a list using a for loop.
- Count the number of odd numbers in a list.
- Create a function that returns the smallest number in a list.
- Print all names that have more than 5 characters.
- Find the average of all numbers in a list.
- Create a calculator using functions for addition, subtraction, multiplication, and division.

SET-2

- Create a list of marks and print marks above 75.
- Print all words from a list in uppercase.
- Find the smallest number in a list without using min().
- Count the number of vowels in a list of words.
- Create a function to return the average of numbers in a list.
- Print all odd numbers from a list.
- Create a function to return the first element of a list.
- Count how many words have more than 5 characters.
- Create a function to find the maximum number in a list.
- Create a new list containing only positive numbers.
- Find the product of all numbers in a list.
- Print the index position of a given element in a list.
- Create a function that returns the last element of a list.
- Count how many elements are strings in a mixed list.
- Create a calculator using separate functions for each arithmetic operation.

SET-2

- Create a list of integers and print the square of each number.
- Count the number of negative numbers in a list.
- Find the second largest number in a list.
- Create a function to find the length of a list without using len().
- Print all names starting with the letter "A".
- Create a function to count even numbers in a list.
- Find the sum of all odd numbers in a list.
- Create a function that returns only string values from a mixed list.
- Print all duplicate values in a list.
- Create a function to check whether all numbers are positive.
- Find the second smallest number in a list.
- Count how many numbers are divisible by 5.
- Create a function to swap the first and last elements of a list.
- Print all elements at even index positions.
- Create a menu-driven calculator using functions and user choice.
